

No. 207 - Tubular craniophor (Martin type)

A nickel-plated tube is mounted on a tripod that can be extended upwards by 25 cm. The cranial clamp can be fixed to it by means of a locking screw.

Two hinged joints arranged on top of each other allow the cranial clamp to move, making it possible to put the cranium in any position.

Caution: For cleaning please do not use acetone or acetone-containing cleaning agents.
