

No. 216 – Orbitometer

This instrument is intended for measuring the depth of the orbital cavern or the lengths of the orbital walls and similar dimensions.

A round slide with a small pointed end travels on a small metal pin graduated in millimeters.

Application: If the lower end of the pin is braced against the rear of the Foramen opticum the distance from the latter point from the former can be read off on the pin.

Caution: For cleaning please do not use acetone or acetone-containing cleaning agents.
